Part E — Video outline, recording checklist and AI note

STATUS: NOT RECORDED. No video exists yet. This is preparation only. The Part A section needs your real observations, the AI note needs your real example, and nothing here should be presented as already done. Speak naturally with camera on; use these as prompts, not a script.

1. Timed outline (5:00 total; aim for 4:30–5:00)

Time	Segment	What to cover
0:00–0:25	Intro	Name, who you are, one line on the three things you will cover. Camera on, relaxed. Hindi or English (pick the one you think in).
0:25–1:55	**Topic 1: What surprised me in my Part A visit**	**[YOUR OBSERVATIONS — fill in after the visit.]** Prompts: What did the owner say versus what you saw? One specific detail that surprised you (a tool, a person, a step nobody mentioned). The thing that goes wrong most often and its real cost. One of the two quotes, in their language. What it taught you about how an owner thinks about "tracking". Do not invent anything; if the visit was short or plain, say what you actually saw.
1:55–3:35	**Topic 2: The most important thing in the Vardhan pack that the client did not say directly**	See §2 below.
3:35–4:40	**Topic 3: One decision I would change with another day**	See §3 below.
4:40–5:00	Close	One sentence on what you would do first on Monday (spend time with Ramesh before building). Thank them.

2. Topic 2 talking points: simple order visibility vs advanced feature requests

- **Open with the contrast.** Kunal asks for Amazon/Flipkart integration, an AI sales-prediction dashboard and a modern look. Suresh, who signs the cheque, says one thing: "Mujhe bas phone pe dekhna hai kaunsa order kahan hai."
- **What nobody said directly:** the business does not run on online sales or forecasts. It runs on a physical chain (make, polish outside, pack, dispatch) where the status lives in Ramesh's diary. Evidence from the pack: in the 1–7 Sep sheet, 12 of 25 lines are open, and the most common stated blocker is polish (5 lines); two more are on a payment hold. Online is 3 of 25 lines.
- **The two claims I could not verify:** Kunal says online grows 30% a month; Suresh says it is under 5%. One week of data cannot settle it, so I put integration and AI out of Phase 1 and asked for six months of online numbers.
- **The quieter signal:** customers re-send orders and chase on WhatsApp (Jain, Sharma). That is what no visibility looks like from the outside. Also, the person who matters most for adoption, Ramesh, was not on the call, and the last ERP died because he and the karigars never used it.
- **Say it simply:** "The advanced features are real wishes, but they are not the problem. If we build a screen Ramesh will actually tap, the rest becomes possible later."
- **Be ready to be honest about limits:** I did not treat repeated rows as confirmed duplicates; I flagged them. The 6 kg polish shortage is reported, not verified, and I am not suggesting theft.

3. Topic 3 talking points: one decision I would change with another day

Pick the one you truly believe. Option A is drafted in full because it is the most defensible; options B and C are alternatives. Edit it to your own judgment.

Option A (drafted)	**Decision:** Phase 1 includes full polish reconciliation (kg issued, pcs back, shortage, adjustment ledger). **What I would change:** split it. Keep the simple "At polish / back from polish" stage and days-out in the first release, and build the kg reconciliation only after Munshi ji explains how "6 kg short" is calculated. **Why it could change:** the pack says goods go out weighed and come back counted, so I do not know how the shortage is derived. Building the wrong formula could break trust with Munshi ji and Suresh. The stage view alone already addresses 5 of the 12 open lines. **Why I still included it:** the 6 kg and the 3–4% audit are the only place where the pack hints at money leaking, so the design leaves room for it (PolishLot, LotLine, Adjustment).
Option B	Hold applies per line with a "hold all lines of this party" shortcut. With another day I would ask Suresh whether holds are really per party (payment dues are per party), which would simplify the screen.
Option C	Only Ramesh and Munshi ji record updates for karigars (no karigar login). If the half-day with Ramesh shows karigars already carry smartphones and WhatsApp, I would revisit a lightweight karigar confirmation.

A requirement that can change after more discovery should be named as such, with the question that would settle it. That is the point of this section: show your reasoning, not a perfect spec.

4. Recording and upload checklist

- [ ] Do a 30-second test: face lit from the front, audio clear, phone steady, no background noise.
- [ ] Camera on for the whole video. Talk to us; do not read. Keep a one-page cue card, not full sentences.
- [ ] Length: no more than 5:00. Time yourself once, then record. One retake is fine.
- [ ] Show nothing private: no owner phone numbers, no amounts on registers. If you show the process-map photo, check it is blurred where needed.
- [ ] Cover all three topics in order. Mention that the Part A business is anonymised in the PDF.
- [ ] Upload to Loom, or as an unlisted YouTube video, or to Google Drive with "Anyone with the link can view".
- [ ] Open the link in a private/incognito window to confirm it plays without a login.
- [ ] Paste the link into the submission email. Send within 48 hours; if you need more time, email before the deadline.

5. AI usage note (5–10 lines): draft to edit

Edit this to match what you actually did. Lines in [brackets] need your real information. The brief wants honest, critical use, including one real place where AI was wrong or generic. Do not invent one.

1. Tools: Claude [add any other tool you used], for reading the client pack, drafting the requirement document, the as-is process map and ER sketch, the AE note, the provisional content, and building the PDF and Word files.
2. How I used it: I gave it the brief and the pack and asked for a first full draft, then [describe what you checked yourself, e.g. recounted rows in the order sheet and checked every quote against the call notes].
3. What I did not use AI for: the real-business visit, the interview, the photos, the hand-drawn map, and recording the video.
4. Where AI was wrong or generic: [REAL EXAMPLE — describe one specific output that was inaccurate or generic, e.g. a sentence, number or section.]
5. What I did about it: [what you changed or removed, and how you checked it.]
6. Judgment calls I made on top of AI output: [e.g. what you kept out of Phase 1, which rows you refused to call duplicates.]
7. [Optional: anything you would do differently next time.]

Places to check for a real example (these are genuine assumptions in the draft)

Use these only if you found and fixed them yourself; otherwise ignore them. They are things worth double-checking before you submit:

- The draft treats order-sheet rates as per listed unit (per piece, per dozen, per set) to value held and online lines. The pack never states the rate unit.
- "1.8L" is read as ₹1.8 lakh; the pack does not spell it out.
- The 94–107 lines per month is a one-week extrapolation taken in the pre-Diwali period.
- The 0.36 kg per piece figure assumes one item; the WhatsApp message does not name the item.
- Thresholds such as "7 days" for duplicates, "3 days" for stuck, "under 3 seconds" and the pilot target are my choices, not client evidence.
- The Hinglish choice for the ad rests on the call transcript, not on the audit.

Final honesty check before submission

The video is not recorded by this document. You must record it yourself. Do not say you visited a business unless you did. Topic 1 must contain your actual interview observation; until then, leave it marked pending rather than improvising a story.
Possible AI-assisted correction to discuss only if it matches your actual work: an early draft might treat repeated rows as confirmed duplicates. The source only supports duplicate candidates; the safer requirement is to flag them for human reconciliation and never auto-delete them. Edit this example to describe what you personally checked and changed.
